

WHO WE ARE

Clean Fuels NY is dedicated to advancing a clean fuel standard in New York to tackle transportation emissions, the largest source of greenhouse gas in the state. The coalition is comprised of 60+ members across an array of diverse industries, including leading environmental, public health, and energy groups.

The full list of the coalition can be found at cleanfuelsny.org

WHAT IS A CLEAN FUEL STANDARD?

A clean fuel standard (CFS) is a proven, efficient and cost-effective way to reduce CO₂ emissions and pollution from the transportation sector. An CFS effectively makes polluters pay for the development and deployment of cleaner fuels, including electricity, through a credit-trading system based on total life-cycle emissions.

A CFS is an opportunity for New York to immediately provide cleaner air and lower greenhouse gas emissions to meet our ambitious climate goals, without costing consumers at the pump.

BENEFITS OF LOW-CARBON TRANSPORTATION FUELS

Decrease costs for businesses switching to clean transportation options

Reduce emissions from the transportation sector, which is currently responsible for 36% of New York's global warming pollution

Increase investment and innovation in electric vehicles, biofuels and other low GHG transport solutions in the state

Reduce exposure to harmful pollutants, saving billions of dollars in pollution-related health costs and preventing hundreds of heart attacks and premature deaths

JOIN US

As a member of the Clean Fuels NY Coalition, your organization will receive monthly member updates, the opportunity to elevate your organization in the media and the platform to connect with leading New York businesses and organizations.

Email cleanfuelsny@nylcv.org to join.
